

Kay Sugino

Deputy Director of SPRING Singapore

As an education hub, Singapore has seen the establishment of many private education institutions (PEIs) which complement our public schools and colleges in providing continuous lifelong education and enrichment courses for Singaporeans, while providing quality education for the region.

However, with globalisation and digitisation intensifying, a growing number of students and employees are seeking more educational services in order to keep up with changing workplace needs.

The education industry needs to continue to stay ahead of the curve. It needs to drive innovation through new methods of learning and develop relevant content for emerging sectors while ensuring quality and credibility. In this regard, the Singapore Association for Private Education (SAPE) provides that platform for PEIs to collaborate together to discuss ideas such as adopting new teaching methods, leveraging on technology as well as business process optimisations.

MESSAGE FROM **SPRING SINGAPORE**

As the enterprise development agency, SPRING Singapore has supported SAPE's efforts in leading and facilitating capability development projects for our PEIs through the Local Enterprise and Association Development (LEAD) programme. We are pleased to see SAPE drive innovation within the industry through such industry upgrading projects.

Going forward, SPRING will also be working with SAPE and technology providers to digitalise the industry through Collaborative Industry Projects (CIPs) that will help PEIs adopt new technologies to increase their efficiency and remain competitive globally.

I am confident that SAPE will remain dedicated to its mission of building a strong and reputed private education industry through continuous collaborations and development strategies.

Kay Sugino

Deputy Director, Enterprise Services
and Partnerships Division, SPRING Singapore
